

Poster Guidelines for Teams

King Salman Center for Disability Research · Riyadh, 11–13 October · hackathon.kscdr.org

Please prepare your poster using the attached template and read the points below before you start.

What not to change

- Do not change the logos, colors, or design of the header and footer bands.
- Do not change the poster size. It is A0 portrait (84.1 × 118.9 cm) and is already set.
- Do not change or rename the six section headings, and do not delete any section.

Filling in the header

- Put your team or institution logo in the white box provided at the top right. Use a PNG with a transparent background, and do not stretch it out of proportion. If you have no logo, delete the placeholder text and leave the box empty.
- Write your team number in [**KSCDR_Hackathon_000**], replacing 000 with your own number.
- Replace [**Project title**] with your project name — keep it to two lines maximum.
- Add your team members (up to 5), your affiliation, and your track and category exactly as they appear in your registration.

Filling in the footer

- In the QR box, add a QR code linking to your video, demo, repository, or any additional files. Test that it scans correctly before you submit.
- Add one contact person only: name, email, and mobile.

The six content boxes

- Introduction and problem statement · Objectives and target users · Proposed solution · Methodology and system design · Results and evaluation · Discussion, impact and ethics.
- Keep the text brief in each box. Write short bullets, not paragraphs — the poster should be readable from a standing distance.
- It is preferred to include a system architecture diagram in Methodology, a chart or table in Results, and a screenshot or mockup in Proposed solution.
- You may resize the boxes to fit your text, but keep them aligned with each other and keep the two-column layout. Do not let any box overlap another box or the header and footer bands.

Formatting

- Apply consistent indentation to your text, and use identical formatting across all six boxes — same bullet style, same spacing, same alignment.
- Align text to the left. Do not justify it.
- Recommended fonts and sizes:
 - Project title — Cambria Bold, 112 pt (reduce to 90 pt if your title is long, never below 80 pt)
 - Section headings — Cambria Bold, 36 pt (do not change)
 - Body text and bullets — Calibri, 24 pt (minimum 22 pt)
 - Sub-labels such as "Dataset:" — Calibri Bold, 26 pt
 - Figure captions — Calibri Italic, 20 pt
- If your text does not fit, cut words. Do not reduce the font size below 22 pt.
- Keep strong contrast between text and background, and never place text over a photograph or busy background.
- Do not use color alone to convey meaning — add labels or patterns to charts.
- Use person-first language: "people with visual impairment", not "the blind".

Images

- Use images with a resolution of at least 600 DPI. Do not enlarge a small image — it will look blurred at A0.
- Any text inside a figure must be 20 pt or larger.

Submission

- Submit the PowerPoint file only — one .pptx, named **KSCDR_Hackathon_000_TeamName.pptx**, under 100 MB.
- Do not send a PDF and do not print the poster yourself. Printing is handled centrally.
- Deadline: **4 September 2026** · Send to: kscdr.hackathon@gmail.com
